

END-TO-END RETRIEVAL- AUGMENTED GENERATION WITH AMAZON BEDROCK

**A Seamless Data Extraction and
Response System**

● ● ● [Github-Link](#)

A decorative orange line starts from the top center, curves down and to the right, then curves back up and to the right, ending near the top right corner. Three small orange dots are positioned near the end of this line. In the bottom right corner, there is a large orange semi-circle and a smaller orange arc above it.

Project Overview

Objective:

Develop a comprehensive RAG system using Amazon Bedrock, focused on efficient information retrieval and natural language processing.

INTRODUCTION TO AMAZON BEDROCK

- What is Amazon Bedrock?
- A managed service that provides access to state-of-the-art foundation models for generative AI.
- Offers pre-trained models from various AI providers, including those optimized for different use cases like text generation, summarization, and more.
- Benefits:
- Ease of Use: Simplifies the integration of advanced AI models into applications.
- Scalability: Automatically scales resources to meet demand.
- Security & Compliance: Provides robust security measures and compliance certifications.

Project Workflow

- Data Source: Start with a PDF file.
- Data Extraction: Extract and preprocess text from the PDF.
- Text Chunking: Split the extracted text into smaller chunks.
- Embedding Generation: Use Amazon Bedrock models to convert text chunks into vector embeddings.
- Vector Database Storage:
- Database Used: FAISS (Facebook AI Similarity Search)
- Purpose: Efficiently store and search for vector embeddings based on similarity.

Query Handling

- User Query Input: User submits a query.
- Similarity Check: Embedding model retrieves similar chunks from FAISS.
- Ranked Results: Retrieves and ranks similar results.

Language Model Interaction

- LLM Query: The query is sent to an LLM via Amazon Bedrock.
- Comparison & Matching: LLM compares the query with the retrieved embeddings.
- Result Selection: LLM selects the best matching response.

TECHNOLOGIES & TOOLS

- Amazon Bedrock: Central to utilizing pre-trained models.
- Vector Database: FAISS for storing and retrieving vector embeddings.
- Previous & Current Models:
- Previous: Sentence Transformer, Mistral-7B-Instruct (Hugging Face)
- Current: Mistral model from Amazon Bedrock
- Deployment Environment: EC2 instance, Streamlit app, and additional AWS services.

IMPLEMENTATION DETAILS

- Environment Setup: Conda environment and package installation.
- Deployment Process: EC2 instance setup, repository cloning, and app deployment.

WORKING WITH AMAZON BEDROCK

The screenshot displays the Amazon Bedrock console interface. On the left is a navigation sidebar with the following sections:

- Amazon Bedrock**
 - Getting started
 - Overview
 - Examples
 - Providers
 - Foundation models
 - Base models
 - Custom models
 - Imported models [Preview](#)
 - Playgrounds
 - Chat
 - Text
 - Image
 - Safeguards
 - Guardrails
 - Watermark detection
 - Builder tools
 - Knowledge bases
 - Agents
 - Assessment & deployment
 - Model Evaluation
 - Provisioned Throughput
 - Model access

The main content area is titled "Amazon Bedrock > Overview" and includes an "Overview" link. It features two tabs: "Explore & Learn" (selected) and "Build & Test".

Foundation models

Amazon Bedrock supports foundation models from industry-leading providers. Choose the model that is best suited to achieving your unique goals.

The following models are displayed in a grid:

- AI21 labs** | Jurassic-2 series | By AI21 Labs
- a** | Titan | By Amazon
- AI** | Claude | By Anthropic
- Command** | By Cohere
- ∞** | Llama 3 | By Meta
- M** | Mistral | By Mistral AI
- S.** | Stable Diffusion | By Stability AI

Spotlight

ANTHROPIC

Anthropic's Claude 3 family of models – Haiku, Sonnet, and Opus – allow customers to choose the exact combination of intelligence, speed, and cost that suits their business needs. All of the models can process images and return text outputs, and feature a 200K context window.

Playgrounds

The playgrounds section shows three interactive cards:

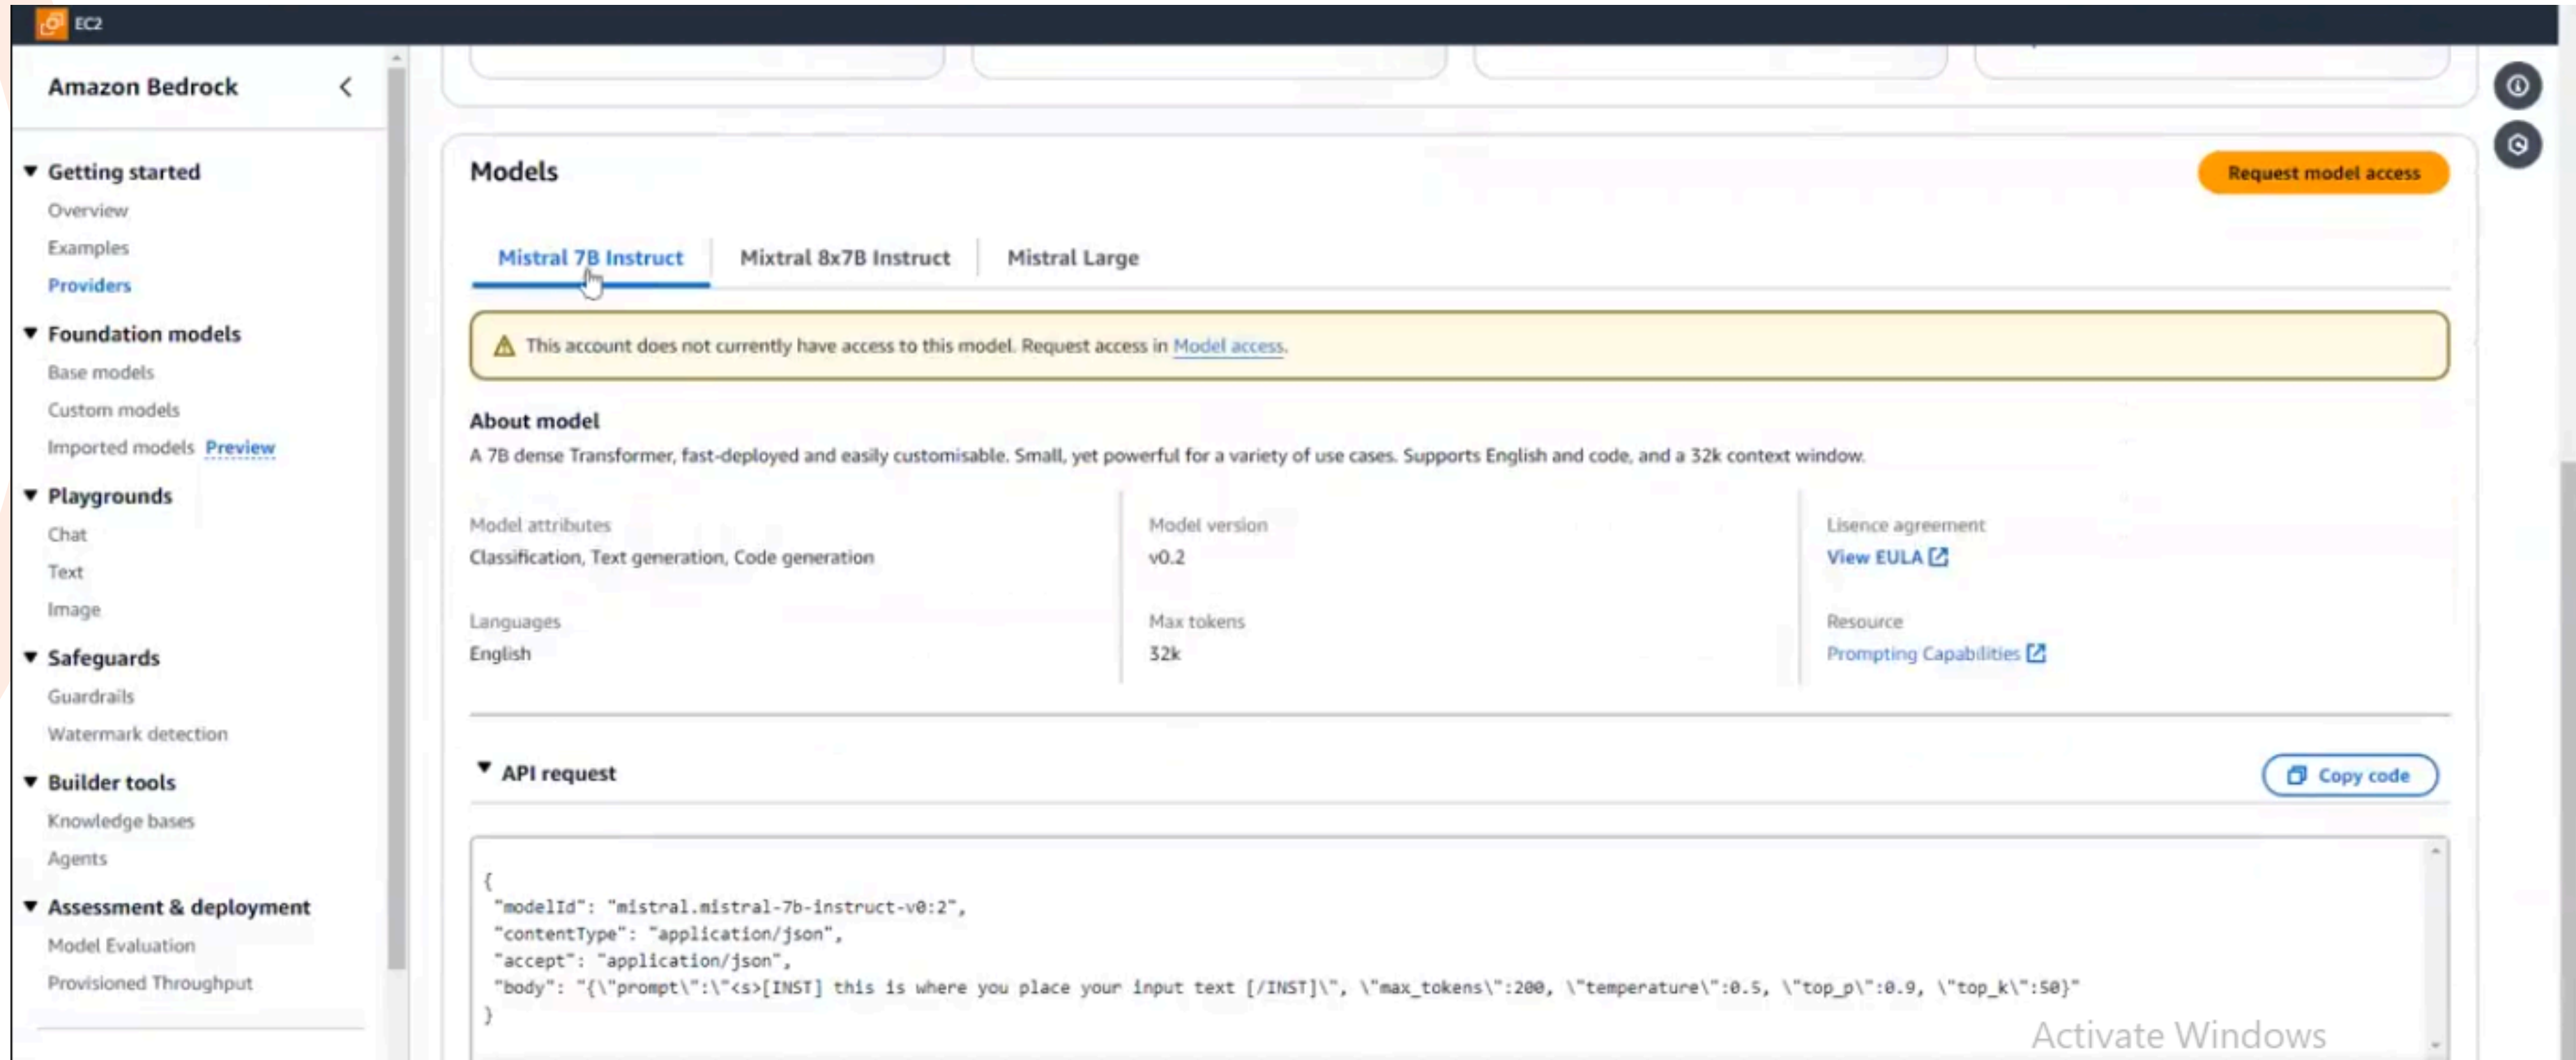

- Chat**: Easily experiment on a vast range of language
- Text**: Experiment using fast iterations on a vast range
- Image**: Easily generate compelling images by providing

Use cases example

Amazon Bedrock supports many genAI use cases such as summarization, Q&A, and image generation. Explore the ways FMs can support your use cases.

About model
A 7B dense Transformer, fast-deployed and easily customisable. Small, yet powerful for a variety of use cases. Supports English and code, and a 32k context window.

Model attributes Classification, Text generation, Code generation	Model version v0.2	Lisence agreement View EULA
Languages English	Max tokens 32k	Resource Prompting Capabilities

    return llm
```

RESULTS

i asked my model ..what
is rainfall?

this is what
my model
replied....!
